

In the Specification:

On page 6, please rewrite the third paragraph of the specification as follows:

According to a particular embodiment the positioning system GPS (Global Positioning System) is used, wherein the position indicators are a GPS receiver. By using this already known positioning system, the system can comparatively easily be configured by arrangement of GPS receivers in the predefined points on the blade, wherein the GPS receivers are modified to determine their positions and transmit them to a computer located eg in the wind energy plant.
